

SX Mighty Strength Grip&Grab Adhesive

INSTANT* GRAB

Sticks Everything to Everything!**

An incredible instant grab adhesive,
which replaces the need for screws, bolts,
nails and other mechanical fixings.

- Incredible instant grab
- Out-performs standard grab adhesive by 200%
- Bonds and fixes to virtually all substrates
- Bonds to wet surfaces, even underwater
- Odourless and solvent free
- Retains elasticity to expand and contract with varying substrates and conditions

EASY

FAST

STRONG

- **Initial bond strength double** that of most other grab adhesives
- **Does not sag** – no need to support or clamp panels
- Highest strength adhesive available – **fast curing**
- **Remains elastic** – Ideal for PROBOND applications
- **Vibration and shock resistant**
- **Unique V-grooved nozzle** to ensure ideal adhesive depth
- **Ideal for all vertical applications** such as fixing of aluminium composite panels, signs, router cut lettering and much, much more!

Colour: **White**

Size: **290ml Tube**

* Please refer to Grip & Grab Technical Data information to determine whether this product is suitable for the intended use
** CPH recommends testing bond prior to application

New into the Australian market Mighty Strength **Grip & Grab** Adhesive is easy to apply and has instant grab properties that allow for time-saving application.

With an initial bond strength, double that of most adhesives on the market, there's no need for messing around with clamps, screws or temporary bracing ... saving you time, effort and money.

This incredible instant grab adhesive can be used to assemble and glue almost anything and it is perfect for all signage applications, especially those in extreme and challenging environments.

Grip & Grab Adhesive will fix and adhere to glass, wood, enamel, painted surfaces, plaster board, coated metals, perspex, concrete, plastics, polycarbonates, PVC, zinc, stainless steel, copper, lead, anodised aluminium, epoxy and polyester panels.

It is ideal for vertical bonding applications such as aluminium composite panel, elevated signage, router-cut lettering and much, much more. It is suited for bonding of most building substrates but is particularly suitable for fixing of large panels.

Simply apply, position and forget.

Grip & Grab Adhesive is easy to use and the unique V-groove nozzle ensures a consistent flow of adhesive for correct application.

There's no mixing or curing required and it is easily applied with a **Grip & Grab** recommended applicator gun.

There's no need for special primers and maximum adhesion can be achieved when surfaces are prepared free from oil, grease and dust. Heavy-weight materials can be applied with confidence.

Grip & Grab Adhesive does not sag, yet the bond remains elastic and flexible, providing vibration absorption and shock-resistance and allowing for expansion and contraction of different substrates.

Under extreme conditions **Grip & Grab** Adhesive out-performs the others, it can be applied internally or externally and tolerates temperatures ranging from -40 to +90 degrees Celsius. **Grip & Grab** adheres to damp and wet surfaces as it is water and weather proof ... yet can be painted over with most lacquers and paints.

Grip & Grab Adhesive is available from Australia's exclusive distributor, CPH Group, freecall 1800 555 060 or visit www.cphgroup.com.au

FAQ

Q. How many tubes do I need?

A. An average of 1 tube per 2 sheets of 2400mm x 1200mm PROBOND Aluminium Composite Panel.

Q. How much do I use?

A. Quantity can vary depending on the weight of the item being adhered. A 2400mm x 1200mm PROBOND Aluminium Composite Panel would require vertical beads every 200mm to 300mm apart on average to ensure sufficient coverage.

Apply **Grip & Grab** Adhesive to the item that is to be adhered - only one surface requires adhesive.

Q. What size nozzle do I need to extract?

A. The provided V-groove nozzle is designed to deliver the correct amount of **Grip & Grab** Adhesive and does not require modification. Standard nozzles are not suitable for use.

Q. How long after I put it up can I leave?

A. As soon as the item is level you will be able to leave. On extremely heavy items, temporary support may be necessary during the curing process. Mechanical fixings should always be used in overhead applications to comply with standard safety procedures.

Q. How long does Grip&Grab take to cure?

A. **Grip & Grab** Adhesive grips instantly, however the curing process takes 24 hours to complete.

Q. Can I paint Grip&Grab?

A. Yes it is possible to paint **Grip & Grab** Adhesive after curing time, there's no need for special primer. **Grip & Grab** Adhesive however, is not paintable with alkyd resin paints.

Q. How long will Grip&Grab last in the tube?

A. Un-opened and stored in cool, dry conditions between +5°C and +25°C, **Grip & Grab** Adhesive will last for 9 months. If opened, shelf-life will be dependant on sealing after use.

Q. What surface preparation do I require?

A. Both surfaces must be stable, clean and oil, grease and dust free. For maximum bond strength surfaces should be thoroughly cleaned with a product such as Beta Bond Adhesive Promoter and Cleaner.

Q. Can I use Grip&Grab in extreme temperatures?

A. **Grip & Grab** Adhesive can be applied internally or externally and tolerates temperatures ranging from -40°C to +90°C.

Q. Is there anywhere Grip&Grab can't be used?

A. **Grip & Grab** Adhesive is not suitable for use on Anti-graffitti coatings, Bitumen-based (Tar) areas, Teflon or PTFE recycled plastics.

Refer to the **Grip & Grab** Adhesive Technical Data to determine whether this product is suitable for the intended use. Bond testing is recommended prior to application.
